

Installation Windows

1. Log in as a local administrator.
2. Download the .zip file and extract the contents to a temporary location on your hard drive.
3. Ensure that no versions of Statistics is running.
4. Run the Statistics 19.0.0.2 Fix Pack executable.

Note: If you are installing on a Windows Server 2008, Windows Vista, or Windows 7 operating system, you **must** use "Run as Admin" by first right-clicking on the executable.

5. Allow a reboot.
6. Statistics 19.0.0.2 is ready to run. Use the Help -> About menu to verify that 19.0.0.2 is now the installed version.

Guidelines for unattended/pushed installations for Windows-based clients:

The SPSS Statistics 19.0.0.2 for Windows Fix Pack obeys the same rules documented in the Site and Network License Administrator's Guides regarding "Extracting the Contents of a Downloaded Installer file" and "Pushing an Installation to Windows Computers".

In this case,

1. Download the appropriate installer file to a temporary location on your hard drive.
2. Open a command window as the local Administrator account and change directory to the temporary download location.
3. Extract the "SPSSStatistics19.0.2Patch.msi" and locale-specific .mst file into a specified location from the downloaded FixPack installer file ("SPSS_Statistics_19002_win32_Patch.exe", for example) using the documented "/b" switch:
SPSS_Statistics_19002_win32_Patch.exe /b"c:\Stats19002FixPack"
4. You can then copy the two extracted files to a network share for easier distribution.
5. Install the patch:

```
msiexec /i "c:\Stats19002FixPack\SPSSStatistics19.0.2Patch.msi" /qn /L*V  
"c:\Stats19002FixPack\Stats19002install.log" TRANSFORMS="c:\Stats19002FixPack\1033.mst"
```
